PCA (PC1 vs PC3)

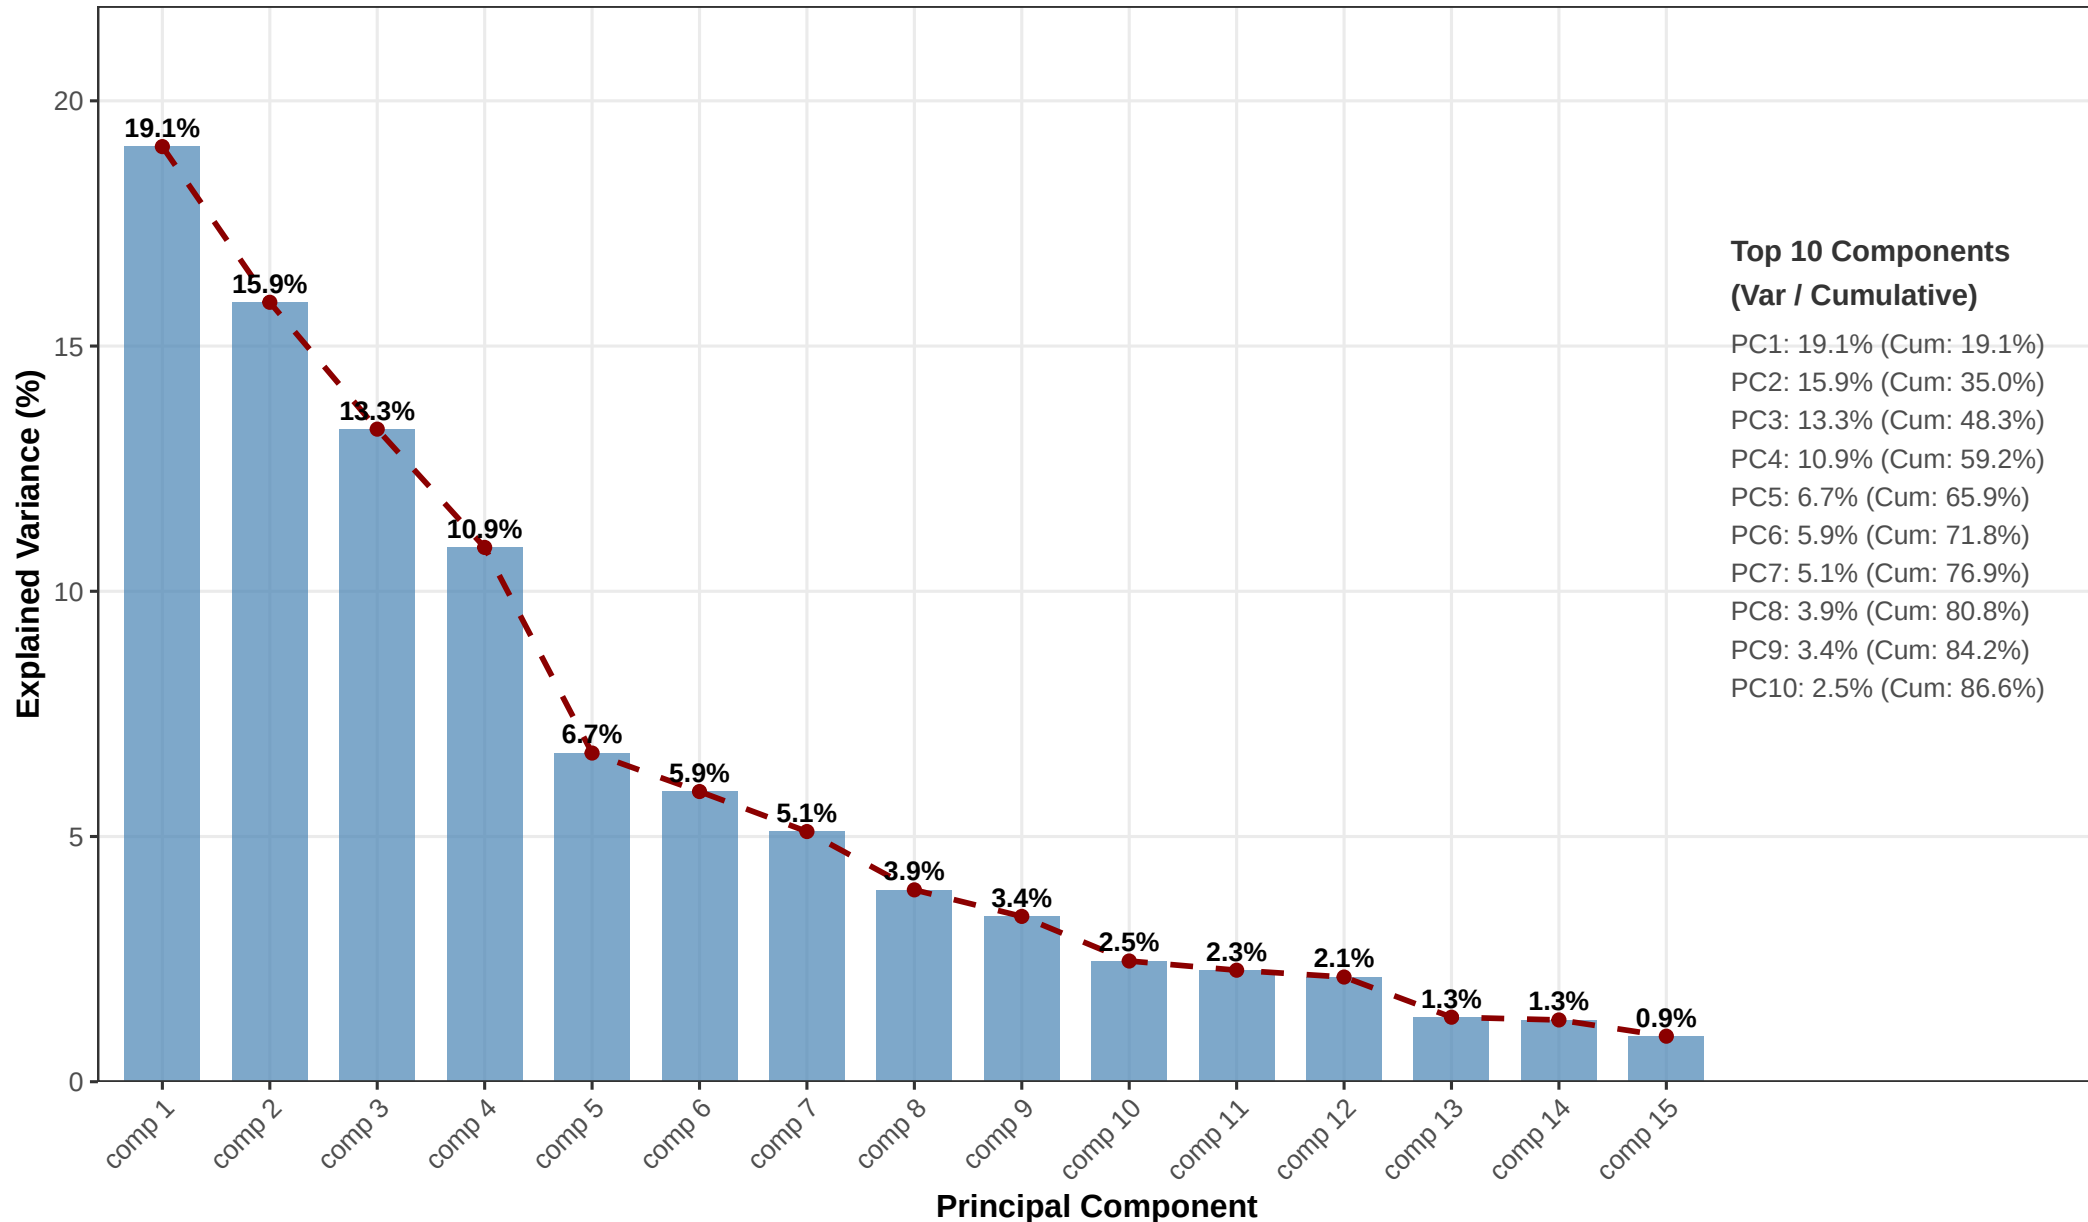

PCA plot showing the first two principal components (PC1 and PC2) for 78 NSCLC samples. The x-axis represents PC1 (16.2%) and the y-axis represents PC2 (15.9%). The plot displays two distinct clusters of samples, one colored green and the other colored red. The green samples are generally located in the upper-left and upper-right regions, while the red samples are generally located in the lower-left and lower-right regions. Two overlapping ellipses, one light green and one light red, enclose the main cluster of samples. A dashed horizontal line is at PC2 = 0. Several samples are connected by lines, indicating relationships or clusters. The x-axis ranges from -10 to 10, and the y-axis ranges from -10 to 10.
